

Customer Journey Map

Date	28 June 2026
Team ID	xxxxxxx
Project Name	Credit Card Approval Prediction System
Maximum Marks	2 Marks

Customer Persona

- **Customer:** Bank Credit Analyst
- **Goal:** Evaluate credit card applications accurately and quickly using a machine learning-based prediction system.

Customer Journey Map

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	• Receive a new credit card application. • Collect applicant details. • Verify required documents.	• Enter applicant details into the ML system. • Review prediction result. • Compare applicant financial profile.	• Approve or reject the application. • Save the prediction result. • Notify the applicant.
Touchpoint <i>What part of the service do they interact with?</i>	• Credit Card Portal • Application Form • Applicant Documents	• Flask Web Application • Prediction Dashboard • Applicant Database	• Banking System • Customer Notification • Approval Report
Customer Thought <i>What is the customer thinking?</i>	• Is the applicant eligible? • Are all required details available? • Can the process be completed quickly?	• Is the prediction accurate? • Does the applicant meet approval criteria? • Should additional verification be done?	• The decision was made quickly. • The process is more efficient. • Machine learning improved accuracy.
Customer Feeling <i>What is the customer feeling?</i>	• Curious • Focused • Responsible	• Confident • Hopeful • Attentive	• Satisfied • Confident • Relieved
Process Ownership <i>Who is in the lead on this?</i>	• Bank Credit Analyst • Customer Service Executive • Document Verification Team	• Machine Learning Prediction System • Credit Risk Analyst • Banking Database System	• Approval Manager • Banking Operations Team • Notification System
Opportunities <i>How can we improve this stage?</i>	• Automate applicant data validation. • Reduce manual document verification. • Minimize incomplete applications.	• Improve prediction accuracy using machine learning. • Generate instant approval/rejection results. • Reduce human errors in decision-making.	• Notify applicants instantly. • Maintain secure digital approval records. • Continuously improve the model using new banking data
